PROFILE

I am Khilesh, a passionate MERN (MongoDB, Express.js, React.js, Node.js) stack developer with a strong foundation in full-stack web development. I have extensive experience in building responsive web applications from concept to deployment, with a keen focus on usability, performance, and design. I am skilled in both front-end and back-end technologies, including HTML5, CSS3, JavaScript, and modern frameworks/libraries. Additionally, I specialize in using Tailwind CSS and Shadcn UI for designing elegant and responsive user interfaces, and I have hands-on experience with Socket.io for real-time communication in web applications.

PROJECTS

- **Engineer Link** - A social media platform for engineering or computer science students. It's a real-time project that includes features like connecting with peers, accepting friend requests, posting, chatting, and collaborative coding. You're using the MERN stack (MongoDB, Express.js, React.js, Node.js), along with Socket.io for real-time communication, Tailwind CSS for design, Redux for state management, and Shadcn UI for designing the user interface.
- **Expense Tracker** - A full-stack web application to help users manage their personal finances by creating and tracking budgets and expenses. The application features secure user authentication with Clerk, allowing users to log in and manage their financial data. Users can create multiple budgets, add, update, and delete expenses, and monitor their spending with real-time updates. The frontend, designed with Tailwind CSS and Shadcn UI.
- **Portfolio Website** - Developed a dynamic and responsive portfolio website using React, CSS, Material-UI, and Framer Motion for animations. The website is designed as a single-page application, with smooth navigation links that scroll to corresponding sections, providing a seamless user experience.
- **Weather Application** - Built a responsive weather application using React and Material-UI, integrated with a freely available weather API to provide real-time weather updates. The application features an intuitive user interface with dynamic weather displays, allowing users to search for and view current weather conditions for any location. Emphasized user-friendly design and efficient API integration to deliver accurate and timely information.
- **News Website** - Implemented a React-based news website featuring infinite scrolling to enhance user engagement and content discovery. Integrated the News API to fetch and display the latest news articles dynamically as users scroll, providing a seamless and uninterrupted browsing experience. Focused on optimizing performance and ensuring smooth loading of content to improve overall usability.

VOCATIONAL TRAINING

Seed IT Solution, Bhilai(C.G.)

- Seed IT Solution, Bhilai Completed a comprehensive VT focused on front-end development, gaining hands-on experience with HTML, CSS, and JavaScript and React.
- Worked on projects under the guidance of senior developers, contributing to the development and enhancement of user interfaces.
- Collaborated with team members to troubleshoot issues and implement solutions, gaining valuable insight into software development best practices.
- Demonstrated strong problem-solving skills and a keen attention to detail in a fast-paced, professional environment.
